

Programme Specification (PG)

Awarding body / institution:	Queen Mary University of London
Teaching institution:	Queen Mary University of London
Name of final award and title:	MSc Perioperative Medicine PGDip Perioperative medicine PGCert Perioperative medicine
Name of interim award(s):	
Duration of study / period of registration:	MSc (1Y FT/2Y PT), PgDip (9M FT /18M PT), PgCert (9M PT)
Queen Mary programme code(s):	PSPOP
QAA Benchmark Group:	
FHEQ Level of Award:	Level 7
Programme accredited by:	
Date Programme Specification approved:	
Responsible School / Institute:	William Harvey Research Institute

Schools / Institutes which will also be involved in teaching part of the programme:

William Harvey Research Institute

Collaborative institution(s) / organisation(s) involved in delivering the programme:

N/A

Programme outline

This programme is for healthcare professionals working to deliver care within the perioperative pathway such as nurses, doctors, and operating department nurses or assistants. It is intended to provide course participants with comprehensive training in recent advances and key issues in the perioperative care of the surgical patient. It will provide a theoretical framework for gaining competence and confidence in managing patients in the perioperative period, as well as developing relevant skills and competencies such as critical appraisal and research activities.

Perioperative medicine is a rapidly growing and innovative field with increasing importance for the delivery of healthcare in the surgical setting. Advances in medicine, surgery, and critical care have demonstrated the need to have a holistic overview of multiple areas, where marginal gains can lead to better outcomes and experiences for patients. The course will be delivered by the Critical Care and Perioperative Medicine Research Group (CCPMG) at QMUL who are a world leading research group in perioperative medicine, and will aim to train the future perioperative practitioners to deliver better healthcare and promote innovation and research in the field.

Aims of the programme

The aims of the programme are to provide the students with a distillation and examination of the background and the latest evidence base in this developing field. It will equip the students in the skills to apply this knowledge to directly help improve surgical outcomes. The course also aims to provide the students with skills to carry out high quality research, audit and quality improvement projects to inform the evidence base in perioperative medicine and deliver high standards of care for an increasingly complex group of patients. Having completed this higher degree, the students will be able to take on leadership roles in clinical, research and teaching position locally and nationally.

What will you be expected to achieve?

The students will be expected to acquire a wide breadth and depth of knowledge in perioperative medicine that includes general medicine as applied to perioperative patients, provision of anaesthesia and analgesia, care of the unconscious patient, and some detailed knowledge of surgical specialities and special patient groups. They will also gain an understanding of critical appraisal, basic research skills, data analysis and statistics. During their observership period they will be exposed to a wide variety of surgical cases and be able to directly observe provision of care with a focus on safety as well as enhanced recovery. The dissertation will allow the students to carry out an in depth study which may be basic science or part of a clinical trial, or a systematic review of a relevant topic.

Academic Content:

A1	Demonstrate an understanding of perioperative medicine and the role of the perioperative clinician in improving outcomes for surgical patients.
A2	Understand the importance of preoperative assessment and optimisation of high risk surgical patients.
A3	Develop a thorough working knowledge of anaesthesia and analgesia, and the role of the anaesthesia team in the provision of safe intraoperative surgical care.
A4	Have a thorough knowledge and understanding of the role of surgical care bundles and other safety initiatives to improve care of surgical patients.
A5	Clear understanding of intra-operative and post-operative care of patients after major surgery (including cancer, vascular, abdominal, cardiac), as well as after major trauma.
A6	Demonstrate the appropriate use of clinical information for diagnosis and management of perioperative patients.
A7	Have a thorough knowledge of how to monitor and care for the unconscious patient during anaesthesia.
A8	Be able to describe and critically appraise the evidence base for enhanced perioperative care after major surgery and the role of these in reducing morbidity and mortality, as well as lengths of stays.

Disciplinary Skills - able to:

B1	Analyze, synthesize and communicate clinical information to a multi-disciplinary team.
B2	Use critical appraisal of research evidence as a framework for high level, prompt clinical decision making

B3	Understand the tools and methodologies for conducting research and how to formulate a structured and critical argument for a research question with the submission of a dissertation relevant to critical care
B4	To communicate with other physicians and health care workers in a collaborative way to plan patient care.

Attributes:	
C1	Develop the leadership skills required to co-ordinate an effective team approach to the delivery of perioperative medicine
C2	Demonstrate appropriate and comprehensive practical and theoretical skills as well as advanced communication expertise- allowing decision making in complex and unpredictable situations
C3	Can act autonomously in planning and implementing tasks at a professional level
C4	Demonstrate autonomy in self directed learning and realise their scope of practice

How will you learn?

Delivered onsite in person, the overall course information, including student handbook and timetables, will be distributed via the virtual learning environment, QMPlus.

A variety of teaching strategies will be employed during a teaching session, from lectures to tutorials, demonstrations and simulation workshops.

Each module will be presented as:

- Module Summary
- Aims and Objectives
- Lectures and additional teaching material
- Plan for assessment
- Additional one-to-one tutorials with individual students will be arranged if required

- 1) Lectures: The lectures will be delivered by members of the course faculty with occasional 'guest lectures' for selected topics.
- 2) Lecture notes and document reading material: These will be maintained on QMPlus in the form of Word documents and/or PDFs. Additionally, topics may be covered in the form of guided reading – with a reading list or short series of scientific papers to read followed by questions or exercises.
- 3) Seminars / Tutorials: Some topics may be covered in face to face seminars or tutorials. These will be based around a topic or around a series of relevant articles from scientific journals.
- 4) Podcasts: Some of the taught material may be delivered by podcast. Some exercises (for example guided reading, critical appraisal, guidelines review) may be introduced by podcast together with instructions for the exercise. This material will be presented in audio files (MP3 format) with, where relevant, linked paper-based reading material.
- 5) Online reading lists: These will be maintained on QMPlus in the form of Word documents and/or PDFs. They will be linked where possible, to the journals in which the papers appear. There will also be a bank of relevant papers available as PDFs on the QMPlus page.
- 6) Simulation workshops will also be used to engage students in the non-technical aspects of clinical care, mainly communication and crisis resource management.

How will you be assessed?

Assessment for the course will include, but is not limited to the following and will vary between modules:

1. Quiz/MCQ at the end of each module. This will test the breadth and some of the details of knowledge gained in the modules. Marks and feedback will be provided instantly as soon as the students have completed the quiz.
2. Essays: This will enable student to critically appraise and distill the evidence base around chosen topics chosen. It will also give students the opportunity to improve their writing skills, be able to present information in figures and tables, as well as work to a deadline. Marks and feedback will be provided in a timely manner to help the students with development of their skills.
3. Short answer questions and case based studies: These will assess knowledge and the ability to write succinctly on a range of topics. These assessments test a breadth of relevant topics.
4. Oral presentations: these will test both knowledge and the ability to impart information to peers and teachers. Presentations are an important part of daily interactions, teaching, and discussions around provision of care. These assessments will help students to practice and develop these skills.

All of these assessments will be designed with "teaching through assessment" principles to enrich the learning for the students. The essays will have grading rubrics to help focus the structure and depth required.

How is the programme structured?

Please specify the structure of the programme diets for all variants of the programme (e.g. full-time, part-time - if applicable). The description should be sufficiently detailed to fully define the structure of the diet.

To be eligible for an award MSc:

- Full Time student must satisfactorily complete all the modules of the MSc: 8 taught modules (each of 15 credits at level 7) and a dissertation (60 credits).
- Part time MSc students, the Dissertation is taken in the second year, and the remaining 8 modules are split over two years. This will split as 90 credits (6x15 credits) to be taken in year one, and 30 credits (2x15 credit taught modules) to be taken in year two + 60 credits dissertation.

To be eligible for an award PGDip:

- Full Time student must satisfactorily complete: 8 taught modules (120 credits) in one year.
- Part Time student must satisfactorily complete: 4 taught modules (60 credits) in year 1 and 4 taught modules (60 credits) in year 2 (students are allowed to select taught modules in order of their preference).

To be eligible for an award PGCert, students must complete 4 x 15 taught modules (2 x 15 credits in each semester).

Academic Year of Study FT - Year 1

Module Title	Module Code	Credits	Level	Module Selection Status	Academic Year of Study	Semester
Perioperative Medicine in Theory and Practice	WHR7091	15	7	Compulsory	1	Semester 1
The preoperative journey	WHR7092	15	7	Compulsory	1	Semester 1

Programme Title: Perioperative medicine

Module Title	Module Code	Credits	Level	Module Selection Status	Academic Year of Study	Semester
Care of the Unconscious Patient	WHR7012	15	7	Compulsory	1	Semester 1
Post-Operative Care	WHR7093	15	7	Compulsory	1	Semester 2
Medicine for perioperative practice	WHR7094	15	7	Compulsory	1	Semester 2
Perioperative care of surgical specialties	WHR7095	15	7	Compulsory	1	Semester 2
Research and Audit Methodology	WHR7014	15	7	Compulsory	1	Semester 3
Observership	WHR7017	15	7	Compulsory	1	Semesters 1-3
Dissertation	WHR7099	60	7	Compulsory	1	Semesters 1-3

Academic Year of Study PT - Year 1

Module Title	Module Code	Credits	Level	Module Selection Status	Academic Year of Study	Semester
Perioperative Medicine in Theory and Practice	WHR7091	15	7	Compulsory	1	Semester 1
MSc Students take 75 credits PgDip students take 45 credits			7	Compulsory	1	Semesters 1-3

Academic Year of Study PT - Year 2

Module Title	Module Code	Credits	Level	Module Selection Status	Academic Year of Study	Semester
MSc Student take remaining 30 credits PgDip Students take remaining 60 credits		15	7	Compulsory	2	Semesters 1-3
Dissertation (MSc students only)	WHR7099	60	7	Core	2	Year

What are the entry requirements?

Applicants will normally possess a medical degree, a 2:2 or above at undergraduate level in Nursing, Physiotherapy or other related allied health professional degrees. Non-UK degrees are marked on a grading scale and must be equivalent to UK 2:2

degree.

Also, at least one year experience working in a hospital as a health professional is essential.

English requirements:

IELTS Academic: 6.5 overall including 6.0 in Writing and Speaking, and 5.5 in Reading and Listening.

How will the quality of the programme be managed and enhanced? How do we listen to and act on your feedback?

The course will be continuously quality-reviewed by the Core Course Management Team made up of the faculty of the course, the external examiner as well as the education committee at the William Harvey Research institute. This process will include peer review of taught components, reviewing student feedback on lecture and module content and delivery, as well as information from PTES. A course participant will be invited to join the Student-Staff Liaison Committee.

Periodically, the continuing validity of the course aims and outcomes will be reviewed both internally and if necessary by involving external experts to ensure that appropriate actions are taken to remedy any identified shortcomings.

What academic support is available?

Precourse: All students will receive pre-course induction material including an online video outlining the course structure background, structure and planned assessments. They will also be provided with a yearly timetable of module dates and teaching times.

Induction: There will be an in person induction meeting with the programme director prior to the start of the course with plenty of time allocated for questions. A specific course handbook will also be provided.

All students will be allocated personal tutors whose role is to assist them with personal problems and to advise on pastoral issues.

There will be instructional videos on how to use QM+. The QM+ landing page will include the following:

- Details of facilities at QMUL including IT services, library services, welfare, accommodation, finance etc.
- Instructions on basics of scientific reading, writing and critical appraisal
- Time management instructions

The programme director and faculty contact details will be made available to all the students. The students can access help directly from the faculty via email or in person.

Education management team will be available via email or in person to resolve any issues relating to course registration, fees, and problems and issues arising during the course.

- Access to student counselors within Queen Mary University of London.
- Access to Teaching and Learning Support Services, which provides assistance and guidance e.g. dyslexia

Programme-specific rules and facts

Continuation and completion of the programme is subject to continued DBS clearance and that it was the responsibility of the student to inform Queen Mary if they were convicted of anything that would affect their DBS clearance.

How inclusive is the programme for all students, including those with disabilities?

Queen Mary has a central Disability and Dyslexia Service (DDS) that offers support for all students with disabilities, specific learning difficulties and mental health issues. The DDS supports all Queen Mary students: full-time, part-time, undergraduate, postgraduate, UK and international at all campuses and all sites.

Students can access advice, guidance and support in the following areas:

- Finding out if you have a specific learning difficulty such as dyslexia
- Applying for funding through the disabled Students' Allowance (DSA)
- Arranging DSA assessments of need
- Special arrangements in examinations
- Accessing loaned equipment (e.g. digital recorders)
- Specialist one-to-one 'study skills' tuition
- Ensuring access to course materials in alternative formats (e.g. Braille)
- Providing educational support workers (e.g. note takers, readers, library assistants)
- Mentoring support for students with mental health issues and conditions on the autistic spectrum

Specific to the course:

1. The learning outcomes for each module will be made explicitly clear. This will be available at the beginning of the module.
2. All reading material will be identified and most will be online (electronic), but also some will be on hard copy through library services at QMUL or purchase of text book. All reading material and resources will be checked to ensure that they are fully accessible.
3. Each module will have a reading list with the above guarantees.
4. All lectures will be recorded and available on Q-Review.
5. Much of the course material, timetables, learning outcomes, reading material and recorded podcats and videos will be on dedicated QM+ pages. These will be on a modular basis with each module having it's own page specially built for the course.
6. Assessments will take into consideration special arrangements for specific students as required.

Links with employers, placement opportunities and transferable skills

Healthcare providers, including the National Health Service, will benefit from employing students who have successfully completed this MSc. The aim of this course is to provide advanced specialist instruction to a higher qualification in perioperative medicine. The Chief Medical Officer Report "Safer Medical Practice" and Department of Health documents "High Quality Care For All"& "High Quality Workforce" emphasise and recommend Simulation, Clinical Skills Training and application of innovative approaches to education. Recent patient safety data from the National Patient Safety Agency (NPSA) suggests 1:10 patients are harmed in hospital by some complication, a significant proportion of these being caused by medical and nursing mistakes. This MSc will consolidate clinical training to a high level and reinforce technical and behavioural competencies essential for patient safety.

The observership module in particular aims to provide these transferable skills required to improve perioperative care in response to the CMO and DoH reports.

Programme Specification Approval

Person completing Programme Specification:

Dr Parjam Zolfaghari

Person responsible for management of programme:

Dr Nina Ravic

Date Programme Specification produced / amended by School / Institute Education Committee:
