

# Adding your Reading List on QMplus

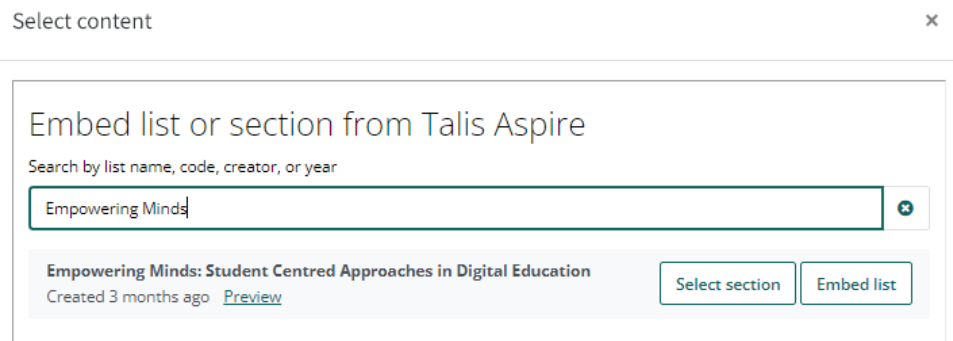

- Make sure your module page is in Edit mode and select 'Add an activity or resource'

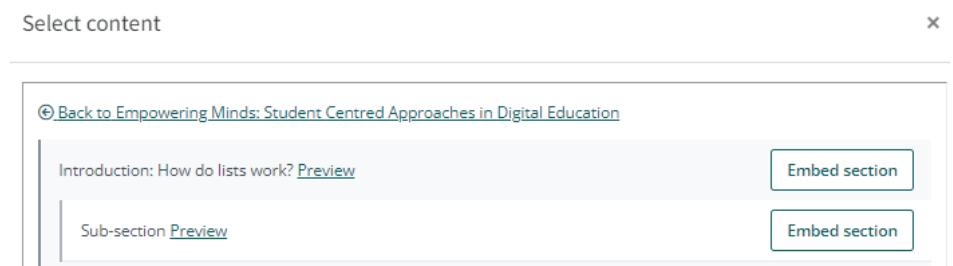

- Select 'Reading Lists Online' from the menu. On the page that opens click 'Select content'

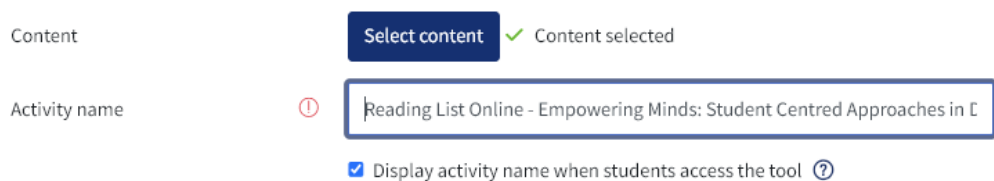

- The system will try to find the most likely matching list. You can also search by module code or list title:

- If your list has sections, you have the option to embed either the whole list or one section – to do this click 'Select section' and then choose from the options presented:

- Once you've chosen a list or section to link, the activity name will automatically populate. You can edit this and the activity description if needed.

- Select 'Save and return to course' to finish, or 'Save and display' to view how the list will appear.

- On the module page, the list will appear with the chosen activity name as a link which opens in a new tab. This replaces the previous embedded window, improving the viewing experience for students.
